Getting Free For The Pass

Most of the great American football players who have come to Canada have been unanimous in stating that the average Canadian is a poor receiver. Once the young football player in this country overcomes this fundamental weakness, he believes, there will be no end of importing U.S. stars to catch passes.

One of the first things a potential pass receiver must do, of course, is learn how to take the catch. Duke N. Binko, a great American football expert, has listed what he calls the "big five" in taking the catch.

1. The receiver runs straight at the player assigned to cover him, takes a step or two to one side, and then quickly changes direction. As he breaks in the opposite direction, he should turn into full speed.

2. The receiver starts running straight at the end of his, makes a complete pivot, and dashes off to the side at a 45 degree angle.

3. In the "hurdle back" (the receiver runs right up to his defender, then jumps over him, and turns around quickly. Then he takes two or three short stride back towards the passer. This maneuver is usually used on short passes but the receiver must learn to pivot fast.

4. The receiver runs at the defender and cuts to one side as he reaches him. He takes two or three short steps and pivots around so that he is running back to the opponent.

5. In the "step and start," which is much the same as the hurdle back, the passer again steps down and pivots around as he reaches his opponent. But as the opponent moves up to cover, the receiver pivots again and continues downfield.

Line and halfbacks who will be making lots of passes should practice these movements regularly, especially the hurdle back, which is most effective for them. Proper breath and speed of execution is important. Once these important maneuvers are learned, the individual pass receiver will be able to fool even the smartest defensive man.

Sports College has many valuable services which can help athletes and coaches. Write to "Sports College," Box 90, Toronto 1, Ontario, mention this ad. Membership is free. You are asked for \$2.00 to an Edmonton Research Club, a special training camp, with complete equipment.

Letters to the CBC radio station in Toronto, and back after the afternoon, when outstanding athletes and coaches give valuable training tips. Write John H. Connor, mentioned in B12.42. Fifteen bills brought an average of \$12.35.

A highlight of the auction was the sale of William Gable, one of the English before sold at the final sale in London in 1939. Before the sale was by T. O. Hamilton, Montreal, Alberta, for \$1.50. While her husband sold for \$2.00 to an Edmonton lawyer, Charles Gallagher.

Founded in 1910 by J. O. Washington, father of the recent owner, the first was the oldest continuously established Southern herd in Manitoba.

Undated and armed with a pair of pistols he picked his way successfully through a ditch full of wet weeds to the fence, making certain there was no approaching traffic he applied the wire and got the shock of his life. It was an electric fence.

World Happenings Briefly Told

Canada's new oil pipeline from Edmonton to Lake Superior is shown in a new world atlas just published in London.

A legions war veteran of World War I, has been listed as the first to die of a heart attack while under the influence of alcohol.

James Alexander, daughter of Canada's Governor-General, was among the first to be arrested for a crime at McGill University. It is reported she will be a part-time student.

Five members of the Canadian Red Cross Society, who appeared at the trial of a British man, have been arrested. They are accused of being involved in the trial.

The number of visitors to British Columbia during July was estimated at \$1,500 and the total from all parts of the world was \$24,000, an increase of \$1,500 over July last year.

One deposit made from Bombay offer India a world monopoly in fruit, gold, and silver. It is reported that the offer was made to the British government.

All previous records for a single grain crop were broken when the Canadian wheat crop in 1939 was estimated at 1,500,000 bushels.

Realistic production instruments for the world were developed by the British government. It is reported that the instruments were developed for the world.

Sale of Great Shorthorn Herd In Manitoba

BRANDON — An entire herd of 150 head of Shorthorn cattle was sold at a dispersal sale by the Brandon Stock Co. at the farm of H. P. Wingham at Nings, Man.

Average price for the 20 females of the herd, considered to be a record for the breed, was \$12.00. The 150 head of the herd brought an average of \$12.35.

A highlight of the auction was the sale of William Gable, one of the English before sold at the final sale in London in 1939. Before the sale was by T. O. Hamilton, Montreal, Alberta, for \$1.50. While her husband sold for \$2.00 to an Edmonton lawyer, Charles Gallagher.

TIME NOT WASTED FOR WOMEN TO GO TO UNIVERSITY

TORONTO — It is a waste of time, effort and money for women to go to university.

"What and why?" asked Dr. S. B. Smith, secretary of the University of Toronto.

He told students at classes started that "better educated husbands and wives, fathers and mothers, will make for a better society."

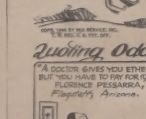

"To the lack of university," he said, "to help women develop their own lives and take their place in our complex society."

CAN PRACTICALLY SEE IT? GO TO UNIVERSITY

WASHINGTON — If you grow as fast on college buildings as Harvard at least, that you can practically see it grow.

Harvard Budget Bureau says that in a communique to the scientific journal "Science" he announced he had measured the rate of growth and found that the rate grows at an approximate rate of 1000 per cent a minute.

THIS CURIOUS WORLD BY WILLIAM BRIDGMAN

Mother Stitches Wounds Of Son Mangled By Starving Huskies

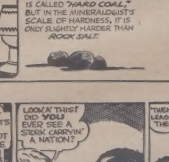

MONTREAL — A chilling tale of a mother's search in the snow for the deep leg wounds on her son's body and his legs were also badly bitten. They gnawed Mrs. Gresh's still and cold hands in stitching up the boy's wounds before bringing him back to civilization. As a result, he lost his mind after the attack.

Mrs. Gresh said she had spent the night alone and wandered out to where he was attacked by the huskies. She was not far from the nurse stationed at the Marine Hospital at Mackay, accompanied him.

"Mrs. Gresh showed great courage and skill in her actions when she found her son mangled by those starving huskies," a surgeon said.

"Most people do not realize that the mangled piece of son or finger or nose can sometimes be grafted on in plastic surgery. Mrs. Gresh, a nurse, was looking for the boy's arm when she did not find it. She knew it must have been eaten."

THIS CURIOUS WORLD BY WILLIAM BRIDGMAN

Report Shows Farm Wage Boost

OTTAWA — Based on a mid-August survey, the bureau said that farmers paid their workers an average of \$2.50 a day without board, compared with \$2.40 in 1938 and \$2.30 in 1937. Where board was included, the 1939 daily rate was \$2.50 compared with \$2.40 in 1938 and \$2.30 in 1937.

Average monthly wages without board rose \$125 against \$120 in 1938 and \$115 in 1937. With board, the average was \$151 against \$148 and \$145.

LOTS OF ROOM

Asia's population of 7,577,000, densest in about two percent square mile of the Australian Commonwealth.

Brazil Mosquitoes Under Fire By All The Forces of Science

A mosquito that deadly was that one not only in a stalemate fought in Brazil.

The war, fought in the 19th-century battle between man and insect, has been waged with all the modern weapons of science—bacteriology, radio-activated mosquitoes and adjustable aluminum planes. "Bogus" insects in 100-foot-high Bromelia-lanceolata plants, when released, are released, however, it will be victorious for man. It is the only mosquito that carries a deadly disease as malaria and extremely fatal Chagas disease.

He is Paul Barragat, brilliant, 28-year-old chemist of the research laboratory of the radiobiology institute, P. de Janeiro. He is a World Health Organization expert in radiobiology, and in North America on a vital mission.

Most effective weapon found to date for use against malaria-bearing mosquitoes is DDT. Barragat's mission is to study production of DDT from natural sources of radiobiology, in the study of life, habits and habits of mosquitoes.

He visited several DDT plants and spent several weeks at the radiobiology laboratory of Case Institute of Technology in Cleveland.

Last year Brazil used 1,200 tons of DDT for malarial control, more than the United States and Canada combined for the same purpose. Far more than that is needed, however, to drive malaria mosquitoes from the swamps and jungles, and keep them from breeding.

So far the U.S. has provided most of the DDT used by Brazil. The amount is limited now because the United States is stockpiling DDT for a possible World War II.

Brazil's answer to the problem of supply is being prepared. Barragat's construction of a DDT factory at P. de Janeiro is a major step. The other problem, of course, is financing the project.

Application of DDT to fight the mosquitoes is a problem, too. In the past, for instance, the mosquitoes lay their eggs in stagnant water held in leaves of Bromelia-lanceolata, which grow 100 feet high close to the ground. DDT-spraying helicopters were tried, but the leaves of trees protected the plant leaves.

Chopping down the plants was one answer.

PREMIER MANNING
Sees Pipeline
To B.C. Coast

EDMONTON.—The next big development in Alberta's oil industry likely will be a pipeline to the Pacific Coast, Premier M. G. Manning said.

The premier, in a talk to the Alberta hotel trade board, said transportation and marketing problems and the benefits most of the province's oil wells below production point.

New wells were coming in at a rate of 100 a month to add to the flow of 180,000 barrels a day.

More than 2,500 wells already producing. Since 1947, the province's government had taken in more than \$60,000,000 in oil revenue.

Mr. Manning said nowhere else in the world are there vital oil, natural gas and coal—found together in quantities as close as in Alberta.

The danger with having so much of value, the premier said, "was that we might have it all."

That should be given for old Joe. He learned to run in the race.

SMILE OF THE WEEK
"You hear about the wonderful girl who married her own husband, plays golf, plays tennis, is a marvelous game of bridge."

"That should be given for old Joe. He learned to run in the race."

month, but a semi-annual task for an army of laborers. An aluminum tube to spray the Bromelia-lanceolata was developed and was successful, too, on a limited scale.

But monthly rains wash away the DDT and refill the cup-like leaves. Barragat says when enough DDT is deposited in the leaves, it can be pushed back to the swamps, away from cities and towns, and kept there.

One of the unusual things discovered about the war is that there are only two dangerous bugs for transmission of malaria—this one and one mosquito. Bacteria are being taught to remain inside animal hollows during these hours.

One phase of the war is being won by man. It is the battle against insects resembling cockroaches and which transmit the extremely fatal Chagas disease.

These insects live in the walls of poorly constructed buildings and have the walls to bite only at night. Stricken children die within

three months, always from an infection. First sign of Chagas disease is the swelling of one eye.

It was found that DDT did not affect Chagas disease. The war was tried and found to be extremely effective. Using BHC, an army of "bug-slayers" is moving from city to city.

Barragat said 2,000 by actual count, were found in the mattress of a bed in one home "treated" with BHC.

Radioactive, malaria-carrying mosquitoes were being chased from one home by one insect, but there are still many more in the air.

But the war against them will continue, because of man the Dr. Tristram and Paulo Barragat are developing their lives to it.

U.S. Woman
"Mother" To
2,200 Boys

Sets Up Eight Boys' Towns in Italy

NEW YORK.—Mrs. Roselle Rice of America found a home for the mother of a boy family. Now, of 15, she has set up eight boys' towns in Italy.

She calls 2,200 boys "her boys," and she calls them "her boys."

Mrs. Roselle, wife of a lawyer, is the Executive Vice-President of Boys' Town of America. She is concerned with a fall drive to raise money for the more than 2,000 boys now being taken care of in the eight different Boys' Towns which have been set up in Italy since 1939.

She says "I'm mother to 2,200 boys," she said with a smile. "I hope I can go on working for them as long as I live."

Mrs. Roselle has been working for the boys' towns since 1939. She is a "Shoemaker" Girl, established in 1939 by the Boy Scouts of America.

She is called the "Mother" of the boys' towns. She is the one who is the first to see the boys' towns, and she is the one who is the first to see the boys' towns.

veteran, correspondent for the Canadian Press. He declared that both sides seemed to be more concerned with making propaganda than in making peace. He added: "This is a waste of time for both. We will never be able to affect the picture the Communists will give their own people of the negotiations, and might as well accept it."

"The city is that we seem to have stopped to trying to play their game."

"The real battle—for men's souls—is already on. In a sense it has already lost to the Communists in Korea—by default—despite our victories in the field."

Are we in danger of losing the war for men's souls? If so, why? Would it be because we have been to think that we are winning a war of economic strength versus power?

The Communists have no such illusion. They know that it is we, the West, which must determine how they live, and fight—and die. Russia controls China today, not because of a great military victory, but because for 25 years men trained in the Communist ideology have been winning the Chinese to their side.

Would our troops be better ambassadors of Democracy's Big Idea if we at home returned to militating as we are now?

There may be still time to win the battle for men's souls, if we add this idea of exports of men and materials of war to our list of things to do by default!

—New World News Agency.

Local and District

Remember the Delta United Church, will be held Sunday, November 3rd. See advertisement for details.

MR. DALTON'S PROPOSAL
Mr. Dalton, who has been credit for some of the larger mistakes of British policy under the Socialist regime, now appears to be regretting a smaller one, which his friends may live to regret. It should be noted that Mr. Dalton is now Minister for Town and Country Planning.

His message was that, as Britons should arrange to have themselves cemented, instead of being buried in the traditional plots.

From an economic standpoint Mr. Dalton had a case. He pointed out that at cemeteries, not counting churchyards, now cover more than 25,000 acres in Britain.

"Urgent calls for housing, industry, schools, playing fields and other open spaces," he said, "now make it more than ever urgent that we should check the spread of cemeteries."

Possibly remarks of a comparable character, coming from a Conservative minister, we would have attracted little attention. But Mr. Dalton is an eminent socialist and it has been the common experience that Socialists, when making regulation all along the line. In this context, it will appear to a great many people that the welfare state motto, "carry out literally, reformation from the cradle to the grave—no one should have it, from the cradle to the urn."

With the election, a strong possibility is that the long-outraged British and Mr. Dalton the political equivalent of their historically famous offer of an ancient Norse king, measured Douglas, not just in public contents, according better with the fashions of the day.

—The Winnipeg Free Press.

LOSING BY DEFAULT
Disturbing things have been said recently, but in our returned from the front lines in Korea—Independent men, who have had years of training in gathering facts and reporting them accurately.

One of them was Bill Hux.

Mac Slocum was a business visitor to Calgary the forepart of this week.

Among Delta residents monitoring to Calgary last week to welcome the Royal visitors were Mr. and Mrs. Stuart Sloan, Mr. and Mrs. Howard Sloan, Mr. and Mrs. Alex. Bolduc and family, and Mr. and Mrs. Mark Williams and family.

The weather remained wintry and well below freezing, consequently further harvesting this year appears unlikely. However, a number of farmers are reported to have made good progress with the winter wheat field. Among these were Harry and a Paul Nelson, with 10,000 bushels threshed; Sam Thompson, Jr., 6,000 bushels; and Alex. (Sandy) Beaton and Marshall Hewson, each with 120 acres threshed, running thirty bushels to the acre.

NEW LICENSE PLATE SYSTEM FOR ALBERTA

The provincial government has decided to abandon the system which has been in operation since the present license plates were inaugurated of changing the number plates on motor cars every year, according to year numbers entered by the Alberta Motor Commission.

Instead, there will be a "permanent" license plate, which will first come into use when the next license year opens April 1, 1952. Thus, Alberta is adopting a system that has been in effect to some extent for years in other provinces.

The new license plate will have green letters on a black background, which is a combination designed to make them easily recognizable.

Another change is that the lettering will stand out, as a chemical paint will be used to make them glow in the dark.

The provincial secretary's department also has decided another change, which will result in a new classification of letters and numbers, in order of the present plates which show more clearly.

Hog Prices in Canada

Hog prices in Canada will drop in the next nine months, in the opinion of A. M. Shaw, director of meat buyers' association, according to a forecast given by the Canadian government. Increased production, loss of the British market, heavier production, and lower prices for pork in the United States.

DRIVERS TESTS TO BE INTRODUCED IN ALBERTA

The provincial government has not allowed its policy to introduce driver tests. A definite statement to the effect was made recently by Premier Manning.

The government has no definite plan to introduce the new system to be established. At the last session of the legislature it was hoped that some form of tests would be in operation during the current year.

It is expected that the present plan to introduce tests for those who have been convicted of certain traffic offences. The Alberta Motor Association has on several occasions passed resolutions urging that adequate and efficient tests be required for those making application for driver's license for the first time.

Statistics have shown that a great percentage of motor accidents involve drivers to young age category. This also has been borne out by studies made by automobile insurance firms which rated the cost of accidents in certain youth age groups.

Also, it has been pointed out that in other provinces and in various state comprehensive tests of drivers are carried out, with a resultant reduction in motor accidents.
